

Jorge Buenrostro

jlbmontejano@gmail.com | jorgebuenrostro.com | github.com/jlbmontejano | Auckland, New Zealand

Summary

Full-stack software engineer with hands-on experience across web, mobile, and backend. Builds production-ready systems using TypeScript, React, Node.js, and PostgreSQL, from responsive UIs to deployment pipelines, with a disciplined approach to testing and code quality.

Skills

Languages: TypeScript, JavaScript, HTML, CSS, SQL, Swift

Frameworks & Libraries: React, Node.js, Express, Vue, SwiftUI, Tailwind CSS, Prisma

Databases: PostgreSQL, Google Firestore

Tools & Platforms: Git, GitHub Actions, AWS, Docker, Jest, Vitest, Playwright, DigitalOcean, REST APIs

Experience

Sportsminers - Full-Stack Developer Oct 2023 – Jan 2025

- Designed and implemented a CI/CD pipeline using GitHub Actions, cutting deployment time by 80%
- Architected the core structure of an internal basketball player scouting application, establishing scalable patterns that accelerated feature development and reduced infrastructure overhead
- Built and deployed a secure authentication system with protected routing and a responsive multi-page UI, enabling user account management and access control across the application

IT Nora - Full-Stack Developer Mar 2023 – Oct 2023

- Engineered interactive UI components for the company landing page, improving lead capture and user engagement through responsive design
- Digitized complex government aid forms for military veterans, implementing client-side and server-side validation logic that reduced processing errors and ensured regulatory compliance
- Developed profile management features for the Catch Zone social media app, enabling users to view and update account information with real-time feedback

Huard Technology Services - iOS App Developer Aug 2022 – Mar 2023

- Self-taught Swift and SwiftUI to deliver a client iOS application on contract, independently transitioning from web development with no prior mobile experience
- Built a Bluetooth communication layer to parse and display real-time binary telemetry data from industrial snow-making equipment, enabling live machine monitoring
- Designed an intuitive operator-facing interface that made complex machine data accessible to non-technical field users

Projects

Let Us Dine github.com/jlbmontejano/let-us-dine

- Built and deployed a full-stack web application using TypeScript, React, Node.js, and PostgreSQL that allows groups to collaboratively find restaurants based on aggregated preferences and location
- Integrated Google Places API with server-side filtering across price, rating, vibe, and beverage preferences, returning ranked results tailored to group consensus
- Implemented unit and integration tests with Jest/Vitest, and end-to-end tests with Playwright
- Containerized with Docker and deployed to DigitalOcean via a GitHub Actions CI/CD pipeline configured to block deployments on test failures, ensuring production stability

Education

Centro Universitario de Estudios Musicales - Bachelor of Music

Dec 2019
